

PROJECT PLANNING PHASE

DATE:10.11.2022

TEAM I'D:PNT2022TMID36755

PROJECT TITLE: Sprint Delivery Plan

PROJECT NAME:IOT based smart crop protection system for agriculture

Product Backlog, Sprint Schedule, and Estimation

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority
Sprint-1	Simulation Creation	USN-1	Connect sensors, Arduino and esp8266	2	High
Sprint-1	Software	USN-2	Develop an application with MIT App inventor (Login page with firebase)	2	High
Sprint-2	Software and Hardware	USN-3	Connect the hardware with IBM Cloud and API Integration	2	Medium
Sprint-2	Software	USN-4	Application development for project	2	High
Sprint-3	Software	USN-5	Establishing Node-Red connection	2	Medium
Sprint-3	Software	USN-6	Connecting application with Node-Red and further application development	2	High
Sprint-4	Testing	USN-7	Testing developed application and working model of hardware	2	High

Project Tracker, Velocity & Burndown Chart:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	16	5 Days	25 Oct 2022	29 Oct 2022		30 Oct 2022
Sprint-2	16	8 Days	31 Oct 2022	07 Nov 2022		08 Nov 2022
Sprint-3	16	6 Days	09 Nov 2022	13 Nov 2022		14 Nov 2022
Sprint-4	8	6 Days	15 Nov 2022	17 Nov 2022		17 Nov 2022 – 18 Nov 2022

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

Total Sprint Points = 56

Total Sprint = 4

Average Velocity = $56/4 = 14$

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.
